

Knowledge Cue Ltd Company Profile

Business Overview

Knowledge Cue is a specialist SharePoint consulting company focused on providing consultancy and training services to organisations that are evaluating and planning to deploy solutions based on Microsoft SharePoint technologies (SharePoint).

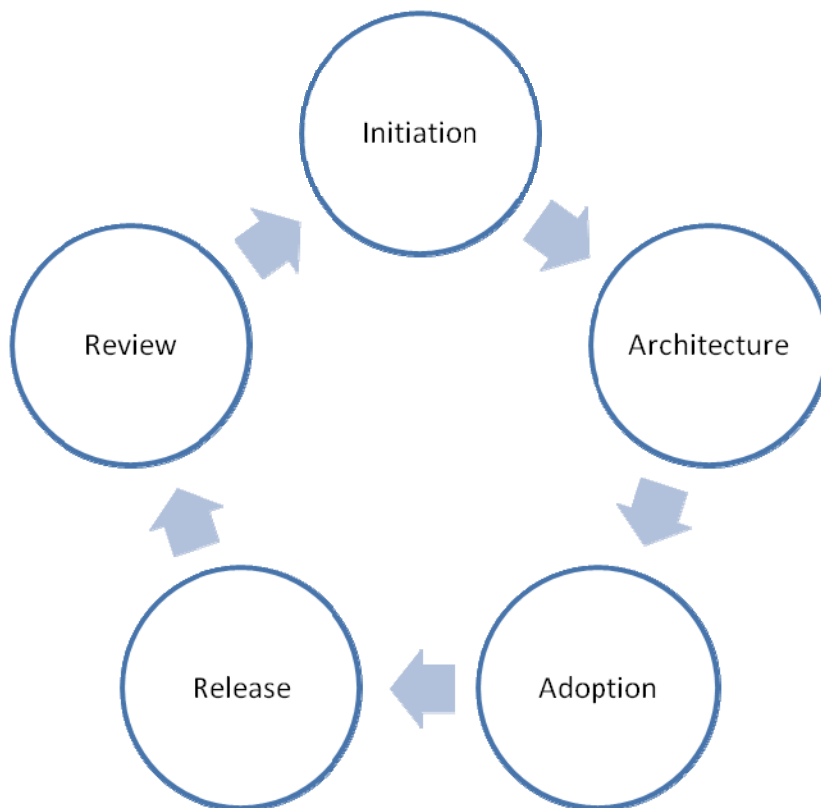

Our main focus is in providing organisations with the most suitable and practical business-focused solutions using SharePoint for achieving business benefits and value. Organisations that have already invested in SharePoint will benefit from our experience in deploying real world SharePoint solutions.

Knowledge Cue believes that SharePoint is a strategic platform that can be leveraged by small and large enterprises to achieve significant business growth by increasing productivity and efficiency in areas of Collaboration, Knowledge Management, Enterprise Content Management and Search by implementing strategic business enabling applications.

Engagement Model

Our model for engaging and delivering solutions for SharePoint is proven and tested across many industry verticals.

We practice and preach the following basic principles for a successful deployment of SharePoint.

These cyclic principles ensure that we focus on your business issues first and partner with your organisation for a successful implementation from day one.

- **Initiation** – Knowledge Cue has real world experience of how you can evaluate SharePoint and how it can meet your business outcomes. We will help your organisation to effectively create executive awareness by providing real world examples of business solutions using SharePoint.
- **Architecture** – By focusing on your unique requirements Knowledge Cue can provide architecture and consulting for deploying a secure and well managed SharePoint deployment. We provide technical architecture guidance for small – medium and large SharePoint farm deployments.
- **Adoption** – The most important and value driven part of a successful SharePoint deployment lies in how your end user needs are met. We provide end user focused training and adoption guidance for all types of users. Our instructors will provide a task and scenario based approach to training which will provide your end users with the skills they need to carry out their tasks easily as part of the solution.
- **Release** – The most critical part of a SharePoint solution is the buzz it creates when nearing deployment and when users start their first interaction with SharePoint. We ensure that your organisation is on track and has the right mix of communication and feedback mechanism in place for your end users to enhance their user experience.
- **Review** – The success to any SharePoint deployment is continuous improvement. Our partnership and engagement ensures that you are constantly improving your business solution for real business growth.
